Introduction / Professional experience

Work and study in different countries have added new vantage points of knowledge that in practice have been useful to provide principals of innovation and experimental design for future creative development of architecture including planning, project management, space programming and interior design. The diversity of experience covers from urban and residential development to renovation of conservation buildings.

Urban planning

Connection & Articulation

October 2003  
Bogota, Colombia

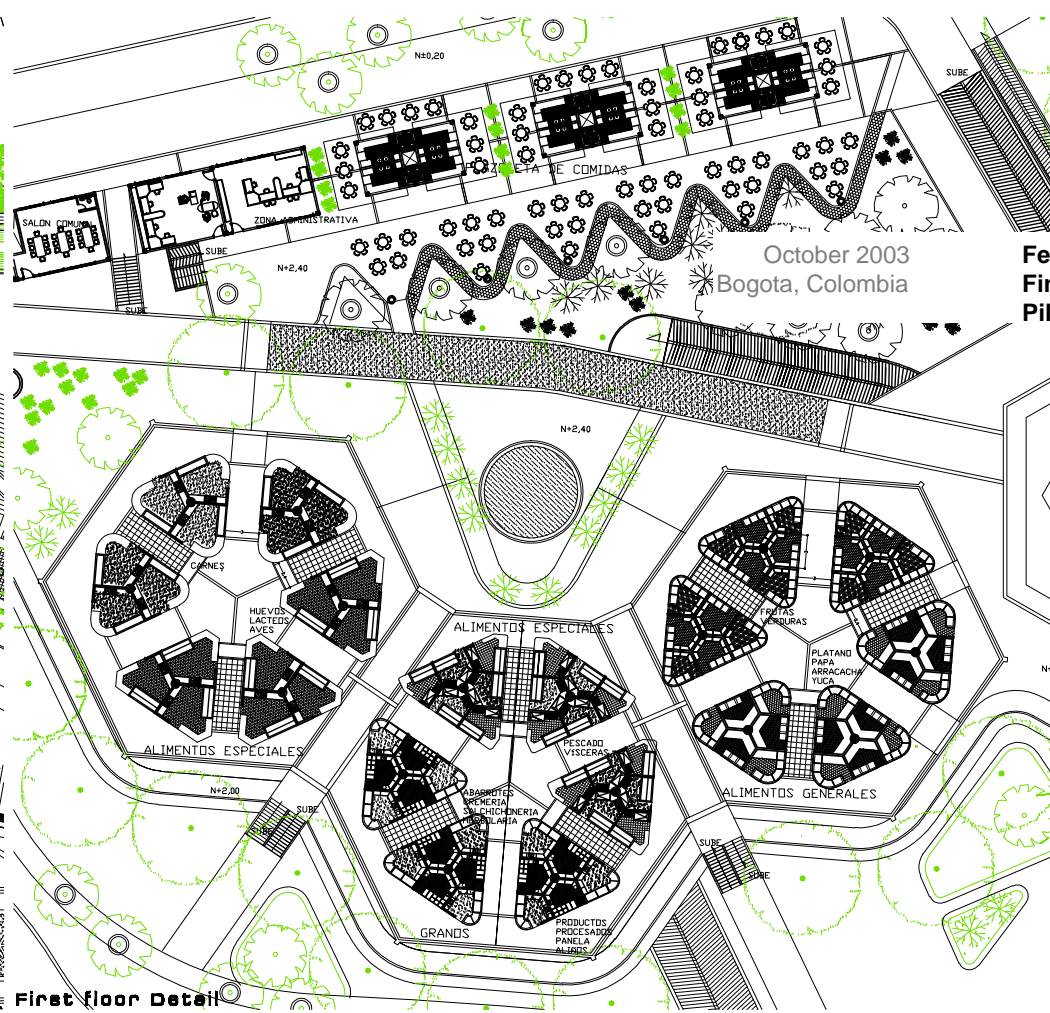

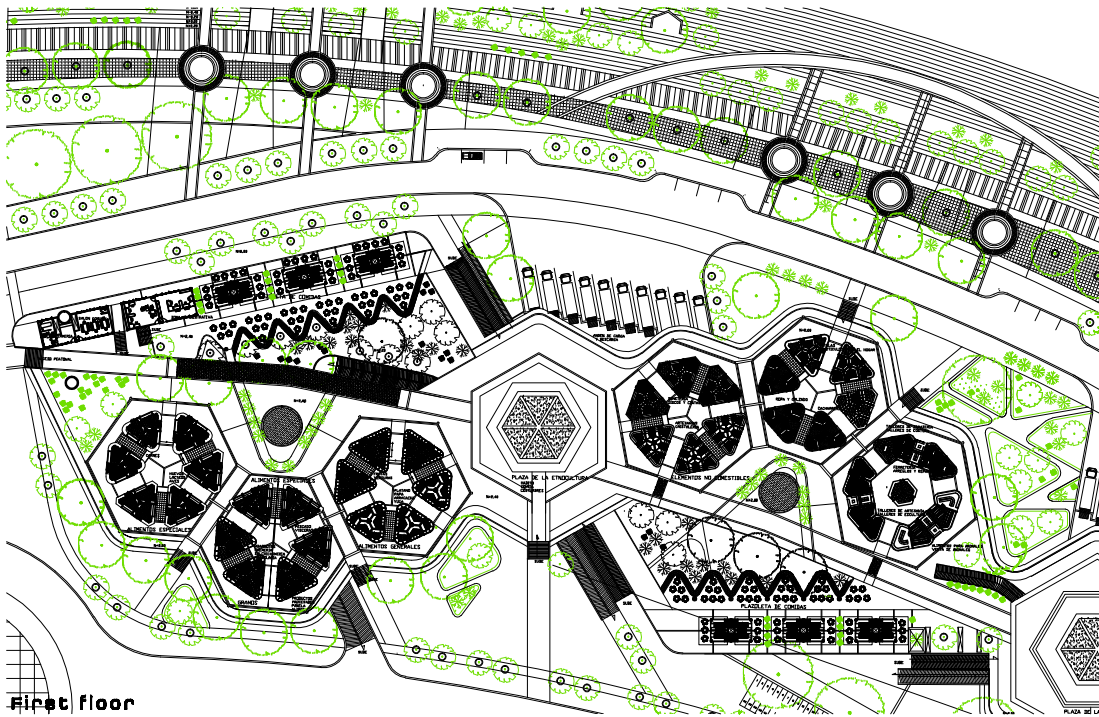

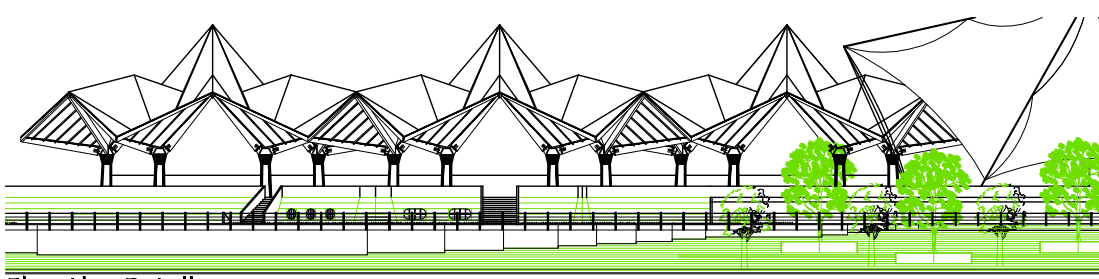

**Fernanda Styzens**  
Final thesis project  
Piloto University of Colombia

## Nodal centre of exchange and commercial dispensing. [Urban planning]

This is a structural urban project that considered the development of a city with a fast population increase and without an urban infrastructure that supply a massive economic and multicultural grow.

This project is the result of the analysis into the characteristics of central hubs in Colombian cities. The aim was to find an urban planning system to anticipate an uncontrolled expansion over the territory without a planification. (Case of study Puerto Boyaca city).

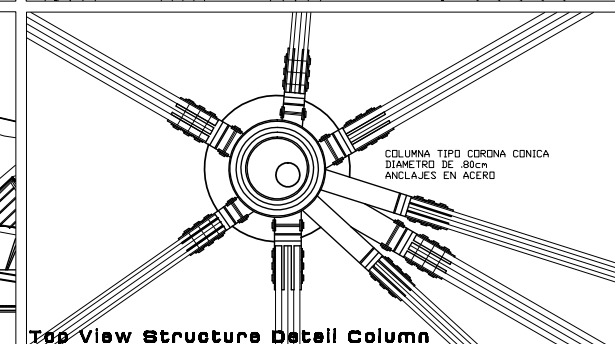

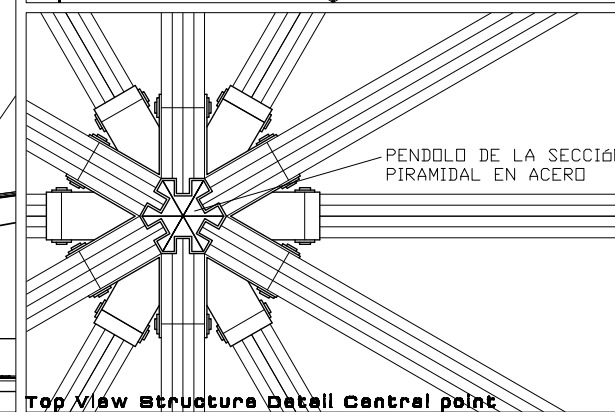

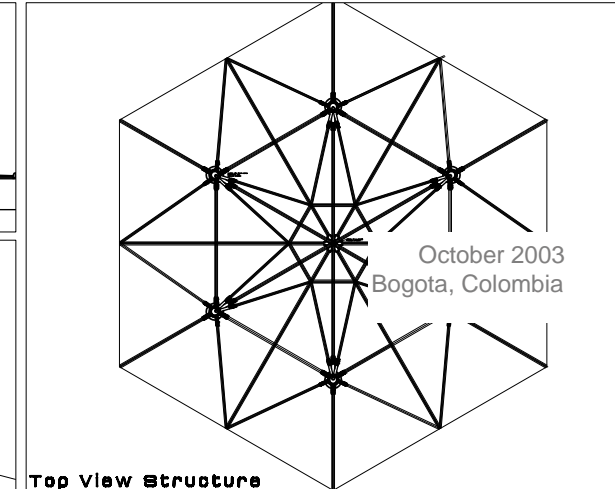

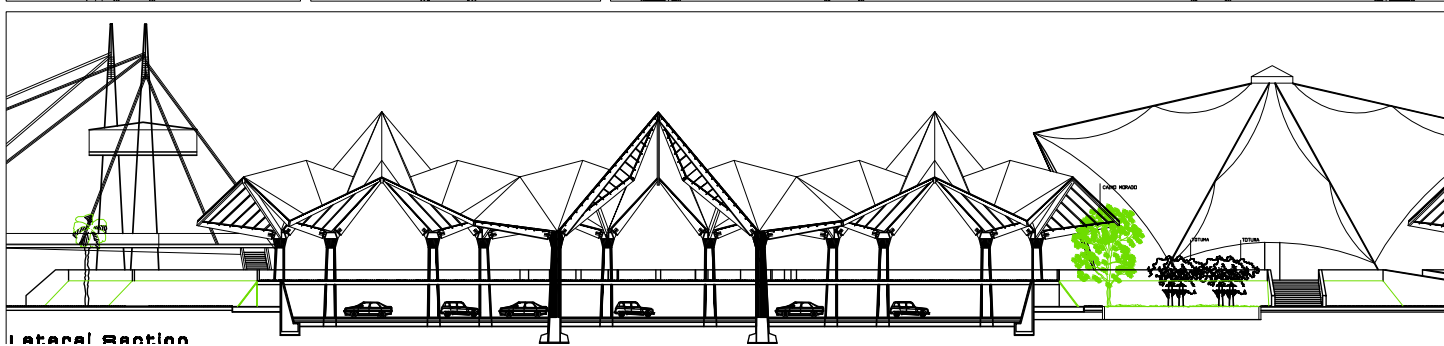

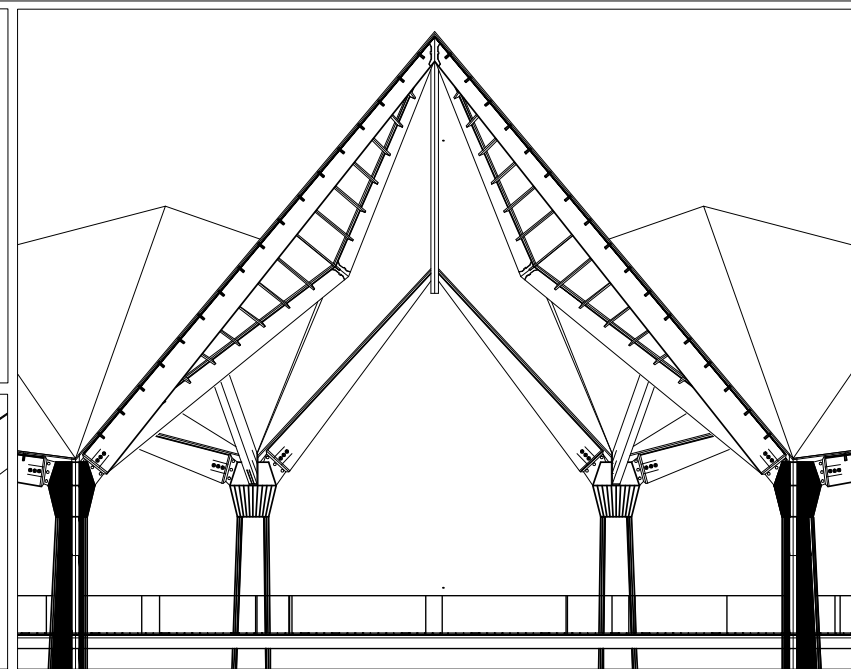

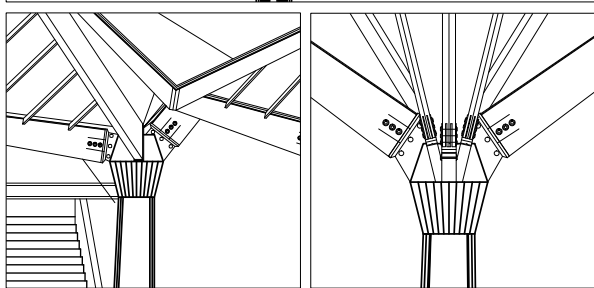

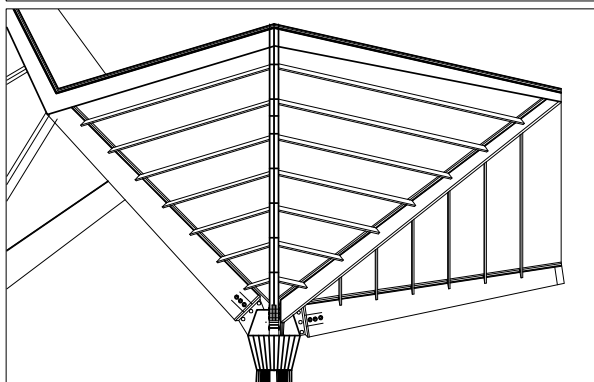

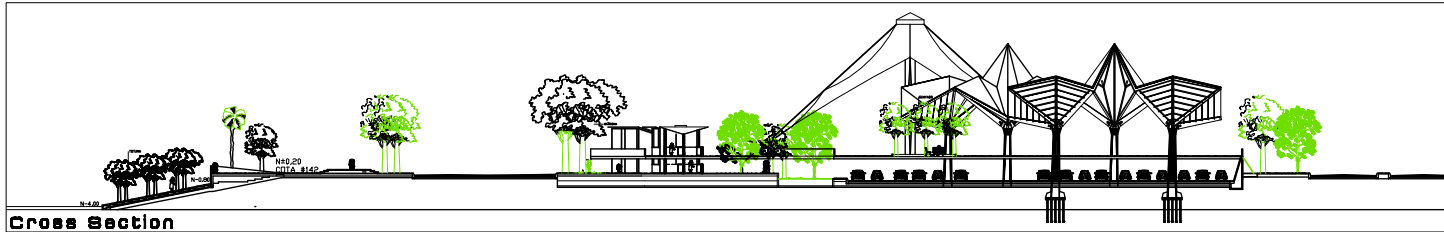

**Fernanda Styzens**  
Final thesis project  
Piloto University of Colombia

Nodal centre of exchange and commercial dispensing. [Urban planning]

Modules articulated by two points of circulation, that gives an interesting dynamic for the people, to use the center for commercial and cultural purposes.

Fernanda Styzens  
Final thesis project  
Piloto University of Colombia

Nodal centre of exchange and commercial dispensing. [Urban planning]

For the punctual project was used open structures, allowing permeability between the city and the Magdalena river.
